MICROSERVICES

Holdings

Enhancements made to the following Microservice: Holdings. Click here to read the full story 🔗

Release Highlights

Temenos Infinity

Digital Banking Servicing Micro Apps

Micro Apps are applications with specific functionality which are fast and efficient than monolithic applications. While traditional monolithic apps contain a wide range of functionality including front-end and back-end operations, Micro Apps are simple, lightweight in nature with targeted functionality.

Setting Communications Micro App

- In the Alert Settings screen, there is an edit option for the account category once we click on the Account number, which is now shown on top of the screen.
- Edit option at Account level Alert subscription:
    - For account-level alerts, the option to 'Edit' the alert subscriptions is now placed in the view alert subscription screen, which can be seen by clicking on the 'View' button for any specific account-level alert.

Multi-language - Language preferences under channel Apps

- A user can save the preferred language in the profile section.

Generation of Single Request in Approval Framework

- Create a single request in the Approval and Request Dashboard, even though the user is part of a Multi-contract.

SME Business Banking - SBA

The Smart Banking Advisor is a digital banking application for a bank's business banking customers. Initially built as a standalone Infinity application, formerly known as Virtual Chief Operating Officer (Virtual COO / VCOO), this project aims to integrate Smart Banking Advisor as a Micro App within Infinity Business Banking.

- Toggling Cash flow and prediction, Simulation chart, and Cash flow chart based on Spotlight's features and permissions.

Spotlight

Spotlight application is used to set up and maintain customer and employee-related information and to configure the behavior of digital banking applications

associated with this information.

- Deep linking of Spotlight has been done in Temenos Explorer (TeX). So if we log in to TeX, then from there, without additional login, we can navigate to Spotlight based on the role that we select.
- Multi-upgrade Utility not available for MSSQL:
  - Multi entity data upgrade tool supports MSSQL database.

- Demo data scripts for the MDS environment in the following modules:
  - Dashboard
  - Alerts
  - Logs
  - Employee Roles
  - Locations (application content management)
  - Campaigns
  - Features
  - Customer roles
  - Service definitions
  - Limits
