Name Matching

Identity Comparison, a new module, offers the name comparison capability to match names across various applications. [Click here to read the full story](#) 

Release Highlights

Regulatory Compliance

Identity Comparison » Name Matching

Names are often used as an identifier. However, misspellings, aliases, nicknames, name similarities, and transliteration errors bring unique challenges in matching names. To overcome this, a new module named Name Matching is introduced to solve one or several of these challenges in a unique way to match names across various applications.

The topics related to this feature are given below:

PSD2 Account Information » Returning a List of Standing Orders Linked to the Addressed Account

Transact PSD2 solution is enhanced to allow Third Party Providers (TPP) to retrieve and display the standing order details for an account to the Payment Service User (PSU) using the transaction list endpoint based on valid consent. Account Consent Management (AIS) supports the return of the standing orders list for an account based on the Berlin Group standards.
